

Usage of the TestAssistant program

Setup

Don't install the **TestAssistant** program into the `..\Program Files` directory, but onto the work area of the computer's hard disk. According to the settings the setup program create a Start Menu folder and desktop icon too.

Usage

At the first start the TestAssistant program asks for the name of the user, and create the empty `RemarkList` text file. Before running **CLC2018** software it is recommended to start TestAssistant, since its resource usage minimal. The program window always stays above other windows therefore it can be minimized if unnecessary.

- If you encounter an error in the CLC2018 software or have a remark and visual information may be helpful, create a screenshot from the active window, dialog, message with **Alt+PrScr** or from whole screen with **Ctrl+PrScr** keyboard shortcut.
- Activate the TestAssistant window and with the *Type of remark* radio buttons select the type of error or remark. A detailed explanation appears in the text field from the selected type. If you created a screenshot the colour of the square beside the *Save screenshot* button changes from green to red, indicated that there is a picture to be saved.
- In the *Description of remark* panel select the suitable features with the drop-down list. Selected lines immediately appear in the text field. If reasonable you can select several lines.
- Complement these general sentences with writing farther information.
- Finally if there is a screenshot, save it with the *Save screenshot* button. In one remark you can save several clipboard images. TestAssistant program denotes these JPG images with the ordinal number of the remark, and with *a*, *b*, *c*, ... letters.
- Then save the whole remark text with the *Save remark* button.
- The window of the TestAssistant program returns to the initial state and wait for the next remark.

The `..\TestData\` directory contains the `RemarkList` text file and saved images. At intervals create a zip file from the content of the directory, and send as e-mail attachment to the help desk of the software. The `RemarkList` text file can grow continuously with the new remarks. However the sent screenshot images you have to delete or move to another directory to avoid sending them twice.

Software Test Assistant

Base data Software: **CLC2018 Support Package**

User name: **Help**

Type of remark

fatal error (freeze or crash of the software, data loss)

superable error (not expected behaviour of the software)

aesthetical or usability imperfection on the user interface

textual or grammatical error on the user interface or in help text

proposal for modification

other type remark

Superable errors
It is possible to continue the work with the program after the error.
Data loss did not happen, wrong data did not arise.

1. Select and complete the suitable description from the drop-down list. If there is not a suitable row, write in your own remark.
2. Define the operation during or after which the error occurred: the caption of the window or dialog, the name of the used control, the description of the started procedure.
3. If there was an error message, and you have a captured window (Alt+PrintScreen) or full screen (PrintScreen) save the picture with the

Description of remark

Superable errors - select the suitable rows from the list **X**

Superable error
The program did not execute the next operation on the expected manner: reading user settings.
There was the next error message:
[*] --- Saved image: Taracsak_2a.jpg

Save screenshot **Save remark** **Close**
